

UNICOR ANNOUNCES REALITY CHECK TO JOIN PROJECT GREEN FED - ARKANSAS GOVED ORGANIZATIONS TO BENEFIT FROM COMPREHENSIVE COMPUTER REPORTING, PERFORMANCE TESTING & FREE e-Cycling

Washington DC/Chicago, Illinois – October, 2005 – UNICOR, Inc., announced they are including Reality Check as part of their bold electronics recycling program for the state of Arkansas. UNICOR and LTW have teamed up to offer a comprehensive “Total Life Cycle Management Program” that includes free computer reporting, performance testing and recycling. Under the Program, GREEN FED, Arkansas residents, public schools and government agencies benefit from free electronics recycling. State schools, including K-12 through higher education and government agencies are now eligible for the entire suite of Reality Check computer reporting services. Reality Check not only addresses required Technology Reporting it also provides the critical intelligence to maximize the life of existing computers and rapidly identifies computers for recycling.

Now schools and government agencies can “view” and manage their computers as effectively as the Fortune 500...a first for most. Reality Check will deliver the following computer reporting and services to qualified participants:

- ✓ **Global Computer Systems Summary Report**
- ✓ **Computer Performance Value Report**
- ✓ **Computer Core Detail Report**
- ✓ **Global Software Installations Report**
- ✓ **Individual Computer Software Installations Report**
- ✓ **Twelve Months Access to Dedicated Computer Management Platform**

UNICOR and LTW are providing schools and government agencies with the most comprehensive program to manage and recycle their computers. While the Program is free, the service offer is “state-of-the-industry”. The cost savings and efficiencies are pronounced. These budget savings come at a most opportune time for cash strapped schools.

“Reality Check is a great benefit to our Arkansas GovEd institutions. Not only does Reality Check provide our organizations with a sophisticated computer management platform, it provides us with the critical intelligence to better understand our recycling needs today and tomorrow. This is another significant step towards insuring that Arkansas stays green,” said Robert Hunter, head of the Arkansas Department of Environmental Quality (ADEQ).

E-waste conservation is more than being responsible to the environment...it is an EPA requirement. With the classification of computers and some peripherals as potentially hazardous material, appropriate disposal is mandated. While various high profile technology companies have publicly acknowledged their e-Waste concerns and some have launched “trade-in” programs for used electronics; these actions do not address the millions of tons of e-Waste in the market. E-Waste that ultimately could harm the environment. The need for responsible e-Waste recycling is well recognized. How to cost effectively manage e-Waste has always been the problem.

UNICOR ANNOUNCES REALITY CHECK TO JOIN PROJECT GREEN FED Cont.

“By bringing Reality Check into the GREEN FED Program, we are now offering GovEd a total IT asset management solution. Many organizations are struggling to understand the vast liability that lies within their IT environment. Reality Check provides state of the industry computer reporting and performance testing so organizations can maximize the value of their computers and easily identify computers for recycling. By teaming with LTW we have been able to help those organizations whose budgets are under the most strain, such as schools. Our GREEN FED Program allows the education and government sectors to satisfy their e-Cycling needs without sacrificing precious budget dollars,” said Larry Novicky, General Manager of UNICOR. “Beyond the immediate benefit to Arkansas, we hope this elevates national awareness and proves that e-Waste can be managed responsibly and cost effectively on a large scale.”

“We are very excited to be included in this initiative. We have found that many government and educational entities are aware of their e-Waste responsibilities but are struggling to find a cost effective solution,” said Charlie Heekin of LTW. “GREEN FED really delivers for the schools. Beyond addressing their Technology Reporting and e-Waste requirements, it provides them with the tools to get the very most out of their existing computers. It simply saves education dollars for education.”

Participating in the Program is simple. Qualified organizations simply go to <http://www.unicor.gov/recycling/greenfed/> to sign up for the program.

For more information on the Program and Reality Check go to www.ltwllc.com/greenfed or contact Charlie Heekin at 312-229-1480 x223

About LTW

LTW has developed an exhaustive IT resource evaluation, asset inventory service and network performance testing suite of tools marketed under the name of Reality Check. Modeled from best Fortune 500 practices, Reality Check delivers the same comprehensive results but at a fraction of the cost and time.

About UNICOR

Since 1994, UNICOR has responded to the electronics recycling challenge. UNICOR's Recycling Business Group provides an environmentally sound way to handle e-scrap materials in a cost-competitive manner. Over the last year alone, UNICOR recycled millions of tons of electronics. With seven factories across the United States and a work force of nearly 1,100 highly workers UNICOR is truly a national e-cycling solution.
